SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	01/23/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

**Office Action Summary**

Application No.

09/839,972

Applicant(s)

BODNAR ET AL.

Examiner

Huy Q. Phan

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 11 December 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 33-36, 41-49, 54-57 and 59-71 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 33-36, 41-49, 54-57 and 59-71 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/11/2006 has been entered.

***Response to Amendment***

2. This Office Action is in response to Amendment filed on date: 12/11/2006.  
Claims 33-36, 41-49, 54-57 and 59-71 are still pending.

***Response to Arguments***

3. Applicant's arguments, see REMARKS, have been fully considered but they are not persuasive.

a) Applicant argued that "Anderson, however, fails to describe the Gateway server storing any digital image data. In fact, Anderson never describes the Gateway server as being a storage device of any kind, let alone "temporarily stor[ing] the digital images during uploading prior to determining the pre-provisioned user account associated with the unique device ID, and prior to associating the digital images with a particular cellular phone device." Furthermore, it is only after the account information is

received and validated that images are uploaded to a storage database, which is never disclosed as being a part of the Gateway server". The examiner respectfully disagrees with the applicant's argument. Anderson discloses that "The gateway server 18, which communicates with the cameras 14 during image uploading" (see col. 4, lines 24-46). Since Gateway server, 18, is the first element in connection with the memory of the camera, 82a, through the internet all digital images that are uploaded must be temporarily saved in the gateway server, 18, till full upload is completed before they are transferred to the database, 20, of the photo-sharing service. Furthermore, Anderson also discloses that "The process assumes that a user has just acquired a digital camera 14 customized as described above, and has just taken the camera 14 out of its box in step 100. After taking pictures with the camera in step 102, the user may review the images in the camera's LCD screen and optionally select a set of images to upload to the photo sharing service 16 in step 104. The user then presses a "send" button on the camera in step 106 to upload the images" (see col. 9, lines 60-67). Apparently, the uploading and temporary storing process is happened prior the account information is received and validated and prior to associating the digital images with a particular cellular phone device. Thus, Anderson discloses the claimed limitations of "a buffer image storage module to temporarily store the digital images during uploading prior to determining the pre-provisioned user account associated with the unique device ID, and prior to associating the digital images with a particular cellular phone device".

c) Applicants argued that Anderson does not teach "a module allowing a user to specify a user name and password for the user account that has been automatically

established, when online access to the data is predicated upon user input of the user specified user name and password". The examiner respectfully disagrees. Since, Anderson discloses that "the camera is provided with default Internet service provider (ISP) information during manufacturing, including an ISP access number, and user ID and password (if required). The camera establishes connection with the default ISP in step 118 by dialing the preloaded access number, and by sending the preloaded user ID and password to the ISP" (col. 10, lines 15-28, for more details see cols. 10-12). Thus, Anderson teaches "a module allowing a user to specify a user name and password for the user account that has been automatically established, when online access to the data is predicated upon user input of the user specified user name and password".

The examiner relies upon reference, as a whole, to anticipate the instant claim, but reference's specific citations to pinpoint pertinent passages to aid in the understandings of the reference as applied to the particular claimed elements.

e) In response to applicant's arguments, with regarding to "The Applicants do not admit that Link II is prior art and reserve the right to swear behind Link II at a later date", have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2617

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 33-36, 41-49, 54-57 and 59-62 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson (US-6,636,259).

Regarding claim 33, Anderson discloses a system (fig. 1 and description) facilitating uploading of digital images from a digital camera (fig. 1, "digital camera 14"), the system comprising:

- a digital camera ("digital camera 14", col. 3 lines 27-30) for capturing digital images (col. 3, lines 40-49);

- a Web site (fig. 1, website 22) for hosting said digital images captured by the digital camera (col. 3, lines 32-49);

- a transport mechanism (described as "the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity", see col. 4, lines 52-56) for uploading the digital images from the digital camera to a user account (fig. 1, user account 40) at the Web site (described as "when the cameras 14 connect to the Internet, the cameras 14 automatically upload their images to the photo-sharing website of the corresponding entity", see col. 3, lines 32-49), said user account being pre-provisioned for the digital camera (col. 3, line 50-col. 4, line 30);

- a module (OS 70, see fig. 3 and its description) for automatically associating the digital images uploaded to the Web site with the pre-provisioned user account (col. 3, lines 40-49) and thereafter providing on-line access to the digital images (col. 4, lines

31-45), without requiring a user to manually set up the user account ("automatically"; col. 4, lines 25-30; for more details see fig. 1, and its description) and;

a provisioning information module ("the camera with software", col. 4, lines 9-30, also see fig. 3 and its description) that generates a unique device ID ("create entity-specific cameras 14", col. 3, lines 40-49) that is used by an accounting management module (OS 70, see fig. 3 and its description) for associating the digital images with a particular cellular phone device (described as "the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity", see col. 4, lines 52-56) used by the digital camera to upload digital images (described as "when the cameras 14 connect to the Internet, the cameras 14 automatically upload their images to the photo-sharing website of the corresponding entity", see col. 3, lines 32-49).

a buffer image storage module to temporarily store the digital images during uploading prior to determining the pre-provisioned user account associated with the unique device ID; and prior to associating the digital images with a particular cellular phone device (col. 4, lines 24-45; col. 9, lines 60-67; col. 11, lines 20-67, for more details see cols. 11-12).

Regarding claim 34, Anderson discloses the system of claim 33, wherein said digital camera employs a cellular phone for wirelessly uploading the digital images (col. 4, lines 52-56 and col. 3, lines 40-45).

Regarding claim 35, Anderson discloses the system of claim 34, wherein said

Art Unit: 2617

digital camera and said cellular phone are selectively coupled to one another (col. 4, lines 47-56).

Regarding claim 36, Anderson discloses the system of claim 33, wherein a unique device ID associated with the digital camera is used for associating the digital images with the user account ("entity IDs 28 from each camera 14 and matches...the identified user", col. 4, lines 10-30; also see abstract and for more details see figs. 2-4 and their descriptions).

Regarding claim 41, Anderson discloses the system of claim 33, wherein said Web site receives digital images as they are uploaded (col. 3, lines 32-49).

Regarding claim 42, Anderson discloses the system of claim 33, wherein said Web site continues to store digital images that are uploaded for some period of time (col. 11, line 20-col. 12, line 61).

Regarding claim 43, Anderson discloses the system of claim 33, wherein said Web site provides on-line access to the digital images (col. 4, lines 31-38).

Regarding claim 44, Anderson discloses the system of claim 33, wherein said digital camera includes connectivity to a cellular phone, for uploading digital images (col. 4, lines 52-56 and col. 3, lines 40-45).

Regarding claim 45, Anderson discloses the system of claim 33, wherein said digital camera include wireless communication capability (col. 4, lines 52-56 and col. 3, lines 40-45).

Regarding claim 46, Anderson discloses the system of claim 33, wherein said transport mechanism comprises a wireless communication network (col. 4, lines 47-67).

Regarding claim 47, Anderson discloses the system of claim 33, further comprising: a database (fig. 1, gateway server 18) at the Web site for maintaining the uploaded digital images along with an associated unique device ID for the images (fig. 1 and description).

Regarding claim 48, Anderson discloses the system of claim 33, further comprising: a module allowing a user to specify a user name and password for the user account that has been pre-provisioned (col. 2, lines 48-49).

Regarding claim 49, Anderson discloses the system of claim 33, wherein online access to the digital images is predicated upon user input of a valid user name and password (col. 11, lines 20-27).

Art Unit: 2617

Regarding claim 54, Anderson discloses an apparatus for automating activation of a user account associated with a user-operated device (col. 3, lines 25-47), the method comprising:

- a Web site (fig. 1, website 22) to host user data transferred by the user-operated device (col. 3, lines 25-49);

- a transport mechanism (described as "the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity", see col. 4, lines 52-56) to enable uploading of the user data from the user-operated device to a user account (fig. 1, user account 40) at the Web site (described as "when the cameras 14 connect to the Internet, the cameras 14 automatically upload their images to the photo-sharing website of the corresponding entity", see col. 3, lines 32-49), the user account being pre-provisioned for the user-operated device (col. 3, line 50-col. 4, line 30);

- a module for automatically associating the user data uploaded to the Web site (col. 3, lines 40-49) with the pre-provisioned user account based on a unique device ID of the transport mechanism ("the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity" (see col. 4, lines 52-56).

Consequently, the camera and cell phone wireless communication part are integrated into one device thus having one unique ID information), and thereafter providing on-line access to the user data (col. 4, lines 31-45), such that the user need not manually establish the user account at the Web site (col. 3, lines 32-49);

an identification module to determine if the data transferred by the user-operated device is from a valid type of user-operated device (col. 10, lines 30-36, for more details see cols. 10-12); and

a buffer to temporarily store the user data prior to determining the user account associated with the unique device ID (col. 11, lines 20-67, for more details see cols. 11-12).

Regarding claim 55, Anderson discloses the apparatus of claim 54, wherein the user-operated device is selected from among the following: a digital camera, a cellular telephone, a cellular telephone periodically coupled to a digital camera, and a cellular telephone including a digital camera (col. 4, lines 47-67).

Regarding claim 56, Anderson discloses the apparatus of claim 54, wherein the transport mechanism has a unique device ID ("the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity" (see col. 4, lines 52-56). Consequently, the camera and cell phone wireless communication part are integrated into one device thus having one unique ID information) that is used for associating the user-operated device with the user account that has been pre-provisioned for the user data (fig. 1 and its description).

Regarding claim 57, Anderson discloses the apparatus of claim 54, further comprising: a provisioning information module ("the camera with software", col. 4, lines

9-30, also see fig. 3 and its description) to generate a unique device ID ("create entity-specific cameras 14", col. 3, lines 40-49) that is used by an accounting management module (OS 70, see fig. 3 and its description) for associating the user-operated device with the user account (fig. 1 and its description).

Regarding claim 59, Anderson discloses the apparatus of claim 54, further comprising: a database (fig. 1, gateway server 18) at the Web site for maintaining the uploaded user data along with an associated unique device ID for the images (fig. 1 and description).

Regarding claim 60, Anderson discloses the apparatus of claim 54, further comprising: a security module to allow a user to specify a user name and password for the user account that has been pre-provisioned (col. 2, lines 35-58).

Regarding claim 61, Anderson discloses a system (fig. 1) to enable automatic provisioning of a new user account ("a first time connection", see col. 2, lines 35-54) comprising:

a receiving logic to receive data from a peripheral device (described as "the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity", see col. 4, lines 52-56), coupled to a digital camera ("digital camera 14", col. 3 lines 27-30), having a unique device ID ("the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity"

Art Unit: 2617

(see col. 4, lines 52-56). Consequently, the camera and cell phone wireless communication part are integrated into one device thus having one unique ID information), the data destined for storage on a repository on the system (fig. 1 and its description);

an account management module (OS 70, see fig. 3 and its description) to automatically establish a user account ("create entity-specific cameras 14", col. 3, lines 40-49), including creating a user identifier (ID) based, at least in part, on said unique device ID assigned to the peripheral device (fig. 1 and description);

a media gateway (fig. 1, gateway 18) to associate the data with said user ID (col. 4, lines 25-30; also see fig. 1 and its description);

such that an account (fig. 1, user account 40) is automatically created for the owner of the peripheral device (col. 3, lines 50-col. 4; see fig. 1 and description), without requiring the user to first set up a user account (fig. 1 and its description), or requiring any additional information to be stored on the peripheral device (see col. 2, lines 35-58; for more details see cols. 3-5); and

a module allowing a user to specify a user name and password for the user account that has been automatically established, when online access to the data is predicated upon user input of the user specified user name and password (col. 10, lines 15-28, for more details see cols. 10-12).

Regarding claim 62, Anderson discloses the system of claim 54, further comprising: the media gateway (fig. 1, gateway 18) to query the peripheral device for

the unique device ID in response to receiving the data (col. 4, lines 25-30; also see fig. 1 and its description).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 63-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson in view of Yeh (US-6,993,497).

Regarding claim 63, Anderson discloses a method (fig. 1 and its description) facilitating uploading of user data from a user-operated device (digital camera 14, see fig. 3 and its description), the method comprising:

receiving a transfer request (described as "when the cameras 14 connect to the Internet, the cameras 14 automatically upload their images to the photo-sharing website of the corresponding entity", see col. 3, lines 32-49) from a cellular phone (described as "the camera 14 could be provided with built-in cellphone-like wireless communication... for Internet connectivity", see col. 4, lines 52-56) having a unique device ID (Consequently, the camera and cell phone wireless communication part are integrated into one device thus having one unique ID information), to transfer data to a Web site (fig. 1, website 22) from the user-operated device (col. 3, lines 40-49);

determining if there is a user account associated with the unique device ID (col. 11, lines 20-60), and if so, associating the user data with the user account (col. 7, lines 13-20); and

if there is no user account ("none are found", see col. 2, lines 35-54) associated with the unique device ID, establishing a user account automatically at the particular Web site, including creating a user identifier (ID) based, at least in part, on said unique device ID (col. 2, lines 35-50).

Anderson further discloses that "The server then sends user account information to the device, including an account ID and password. The user account information is then stored on electronic device for use the next time the electronic device accesses the website, whereby the user does not have to enter account information in order to establish the ISP connection or the website account before accessing the public network" (col. 2, lines 58-54). But, Anderson does not particularly disclose upon a first user request for data from the website, receiving the entry of a user defined login and password for providing access to data on the website, and associating the user defined login and password with the user account. However, Yeh teaches upon a first user request for data from the website, receiving the entry of a user defined login and password for providing access to data on the website, and associating the user defined login and password with the user account (col. 5, line 55-col. 6, line 4); therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Anderson as taught by Yeh for purpose of allowing only authorized user to access the user account.

Regarding claim 64, Anderson and Yeh disclose the method of claim 63.

Anderson further discloses wherein the user-operated device is selected from among the following: a digital camera, a cellular telephone, a cellular telephone periodically coupled to a digital camera, and a cellular telephone including a digital camera (col. 4, lines 47-67).

Regarding claim 65, Anderson and Yeh disclose the method of claim 63.

Anderson further discloses wherein establishing the user account occurs upon receiving a first transfer request from the user-operated device ("a first time connection", see col. 2, lines 35-54).

Regarding claim 66, Anderson and Yeh disclose the method of claim 63.

Anderson further discloses wherein establishing the user account occurs prior to first operation of the user-operated device ("none are found", see col. 2, lines 35-54).

Regarding claim 67, Anderson and Yeh disclose the method of claim 63.

Anderson further discloses wherein said user account is established using provisioning procedure to associate the user account with a unique device ID assigned to at least one of the user-operated device and the cellular phone (col. 4, lines 9-46; also see fig. 1 and its description).

Regarding claim 68, Anderson and Yeh disclose the method of claim 63. Anderson further discloses determining whether at least one of the user-operated device or the cellular phone is an authorized device prior to storing the images on the Web site (col. 4, lines 9-46; also see fig. 1 and its description).

Regarding claim 69, Anderson and Yeh disclose the method of claim 63. Anderson further discloses temporarily saving the user data in a buffered storage module until the user data is determined to be associated with a particular user account (col. 11, lines 56-67; for more details see cols. 11-13).

Regarding claim 70, Anderson and Yeh disclose the method of claim 69. Anderson further discloses wherein said content temporarily saved in the buffered image storage module is transferred to an image storage-by-account module in an image repository after the content is determined to be associated with a particular user account (see cols. 11-13).

Regarding claim 71, Anderson and Yeh disclose the method of claim 63. Anderson further discloses having a user account ticket, generated, at least in part, from the device ID ("your camera serial number is 38147" col. 11, lines 51-55), the user account ticket used for initially establishing the user account (see cols. 11-13).

### ***Conclusion***

Art Unit: 2617

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a) Ward discloses "NETWORK CONFIGURATION FILE FOR AUTOMATICALLY TRANSMITTING IMAGES FROM AN ELECTRONIC STILL CAMERA" (see specification).

b) Naidoo discloses that "remote user 155 provides the website with identification information, for example a username and password" (see specification).

c) Judd discloses that "Using previously recorded information such as username and password, (Step 2020) the transfer engine 20 logs into the scanner 16 over the Internet 12 (Step 2030) and pulls the appropriate images from the scanner 16 using standard Internet FTP or DICOM commands (Step 2040)" (see specification).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huy Q Phan whose telephone number is 571-272-7924. The examiner can normally be reached on 8AM-6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on 571-272-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2617

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
